Education

University of Birmingham Sept 2023 – present
M.Eng Computer Science with Software Engineering *Birmingham, UK*

- **Relevant Coursework:** Data Structures & Algorithms, Operating Systems & Systems Programming, Machine Learning, Neural Computation, Natural Language Processing, Intelligent Software Engineering

Kaplan International College, London Jan 2023 – June 2023
Foundation Certificate in Science and Engineering *London, UK*

- **Relevant Coursework:** Mathematics, Information Technology, Extended Project (Research)

Experience

London Success Academy Sept 2025 – Oct 2025
Data Engineering Intern *London, UK*

- Built enterprise-scale ETL pipeline processing 300,000+ records using Python, Apache Spark, and GCP, achieving 80% storage optimisation through Parquet format with real-time API integration
- Orchestrated production data workflows using Apache Airflow on Google Cloud Composer with automated scheduling, BigQuery metadata tracking, and data validation ensuring 99%+ pipeline reliability
- Designed BigQuery data warehouse with partitioned/clustered tables processing $15.3M transaction volume across 5 currencies, implementing query optimisation reducing costs by 80% through partition pruning
- Deployed distributed Apache Spark processing on GCP Dataproc cluster, scaling from single-machine to 3-node architecture, processing 95,000+ clickstream events and 50,000+ financial transactions with zero data loss

Uptrail July 2025 – Aug 2025
Data Analysis Intern *London, UK*

- Cleaned and analysed 2,992 sales records across 499 customers to identify top loyalty tiers and delivery optimisation opportunities (41% delay reduction potential) through 6 data visualisations and strategic analysis
- Developed Scikit-learn logistic regression model on 1,494 streaming customers achieving 76.6% accuracy, identifying mobile usage and geographic patterns as key churn drivers for targeted retention strategies
- Created interactive Tableau dashboard integrating 3 datasets (15,822 records) with 6 calculated KPIs, enabling executive strategic planning through geographic mapping and customer segmentation analysis

Projects

Campus Events Web Application *JHipster, Angular, PostgreSQL*

- Developed a full-stack web application for university students to discover and review campus events and societies as part of a 7-member team using Agile methodologies
- Led CI/CD pipeline implementation using Azure for deployment, Docker containerisation, and GitHub Actions runners
- Engineered RESTful APIs with Spring Boot and resolved database migration issues using Liquibase

Network Firewall Program *C, Networking, Threading*

- Built multithreaded firewall server using pthreads with mutex synchronisation, supporting concurrent client connections and dual-mode operation (interactive CLI and IPv6 network server)
- Implemented linked-list rule management system supporting Add/Delete/List/Check operations for IP and port filtering
- Created IP validation using inet_pton() and byte conversions for precise range matching and connection control

Technical Skills

Programming Languages: Python, SQL, Java, JavaScript, TypeScript, C, Haskell, PowerShell

Data Engineering & ML: PySpark (Apache Spark), Pandas, NumPy, Scikit-learn, Tableau, ETL Pipelines

Web Technologies: React, Angular, Spring Boot, HTML/CSS, Bootstrap, Express.js , Node.js, REST APIs

Cloud & Databases: GCP (Storage, Dataproc, Composer, BigQuery), AWS, Docker, GitHub, Azure, Apache Airflow

Additional Information

Languages: English (C1), Igbo (Native), Spanish (A1)

Achievements: 2023/24 UG Outstanding Achievement Award (SRM Funded); Silver medallist in state-level Physics and Mathematics Olympiads; Top 3 graduating student & Best Student in Further Mathematics (British Spring College)
